

100% US-Based Remote Opportunities

1. Lead Python Architect JOB-29293: For (India & Latam Countries)

Client : [American express](#)

Must have skills:

- Python,
- Microservices architecture,
- Kubernetes,
- Kafka,
- AWS/GCP,
- MySQL/PostgreSQL/MongoDB

Nice to have skills:

- Unit Testing

Project Overview:

Resy is part of American Express and they are a global dining platform. Its mission is to power the world's best restaurants using technology. They currently serve over 5,000 restaurants globally.

Resy is the rearchitecting of the structure of backend services. They need someone who can help work and define new architecture, and also help document existing APIs, work on diagrams/papers/documentation that they have currently, and then recast functionalities. They currently have 1 other Software Architect and the candidate would work alongside him.

2. Senior Python Developer JOB-28877: For(India & LATAM Countries).

Client: *The Trade Desk Client.*

Must have skills:

- Python
- AWS (Amazon Web Services)
- Apache Spark

Nice to have skills:

- Big Data
- Security

Project Description:

We're the fastest-growing demand-side platform in the industry. As a The Trade Desk Python Software Engineer, you are an end-to-end owner. You will participate actively in all aspects of product strategy from designing, building, and delivering products for our clients.

We have dozens of individual, mission-focused teams that are working across a wide spectrum of technological challenges.

You will have the opportunity, depending on your interests and aptitude, to lead engineers that focus on building large-scale distributed systems, petabyte-scale data challenges, machine learning, advanced visualizations, and interactive user interfaces to name a few.

Software Engineers contribute to more than our product they build up our team. You will make others better and raise the bar for those around you.

Position Responsibilities:

You will participate actively in all aspects of product strategy, from designing, building, and delivering products for our clients and eventually to leading our engineers.

3.Full-stack developer" (APAC) JOB-28882: (India & LATAM Countries)

Client: *The Trade Desk Client.*

Must have skills:

- Python
- React
- AWS
- CI/CD pipelines Architecture experience
-

Nice to have skills:

- Containers Microservices
- DynamoDB
- PostgreSQL Node.js

Project Overview:

We're the fastest-growing demand-side platform in the industry.

We are looking for someone with a strong engineering & application architecture background who is well-versed in working cross-functionally on designing and building large-scale software solutions.

You have a sustained track record of making significant, self-directed, and end-to-end contributions to large and impactful software projects. You think beyond just the task at hand to deeply understand the 'why' behind what you are doing.

You are a broadly skilled engineer/architect, accustomed to developing software applications and web services. You have experience building always-on systems in the cloud, working across a variety of technologies and service layers.

You have a product-focused mindset. You have the passion and ability to discover our clients' unique needs and business goals. You help clients achieve them by formulating effective data-driven custom solutions.

You have solid business acumen. You can credibly translate technical concepts to business value for both technical and non-technical stakeholders

You work with confidence and without ego. Our team members have deep knowledge and exercise a high degree of leadership in their daily work. You have strongly-held, defensible ideas, and advocate for what you believe is right. You are also adept at

identifying and evaluating trade-offs, willing to be proven wrong, and quick to walk through fire to support your fellow teammates.

You value, seek out, and foster diversity. We are a global team from many diverse backgrounds, with different experiences and perspectives. To complement this team, you will welcome ideas that are different from your own and be skilled at finding and building from common ground.

You are a creative thinker, not bound by "the way things have always been done". What you know is less important than how well you learn and innovate. We don't need people who know all the answers; we need people who can invent the answers no one has thought of yet, to the questions yet to be asked.

Position Responsibilities:

This is a hands-on role in both designs as well as building software solutions for our clients across our spectrum of custom solution services.

You will be an end-to-end owner. You will interact with some of our largest clients to understand their requirements and business goals. Based on their business goals and requirements, you will perform all necessary tasks including designing, building, and deploying software solutions to achieve those goals.

4. API test automation engineer JOB-29063: For (Latam Countries)

Client: [The Trade Desk Client](#).

Must have skills:

- Java
- TestNG
- Maven
- AWS (Amazon Web Services)
- Jmeter

Nice to have skills:

- Jenkins Hudson,
- Node.js,
- CircleCI
- A number of required talents and their seniority

Positions: QA Engineer (mid to senior x 4) , QA lead engineer (mid to senior x 1)

Project Overview:

At Pluto TV, we approach testing differently -- we are testing, and breaking, code constantly, but we help rebuild it better. Software Test Engineers (STE) design Pluto TV's testing infrastructure and write code to examine and validate large-scale software development and deployments. As an STE, you partner with software developers to create and code tests concurrently with product development. You build tools that help developers be more productive, write better code and test it themselves. Troubleshooting is an understatement; it's more like trouble forecasting. The STE will also act as a representative of the Software Test Engineering Team in scrum meetings and provide input on how to provide better quality coverage for the applications supported. This is a critical role with a wide range of responsibilities, including:

- Work in an Agile Software Delivery methodology highly focused on developing automated tests within an iteration
- Work with the project team to drive Test Driven Development where modules that are being

5. API Test Automation Engineer JOB-20933: For Latam Only

Must have skills:

- Java 11
- Selenium
- TestNG
- Jmeter
- MongoDB
-

Nice to have skills:

- Maven
- Lambda
- Docker
- Gradle
- vanillaJS

Project Overview:

Our client is an internet television service with more than 250 channels of free TV and 1000s of on-demand movies and TV shows.

They are looking for API test automation engineers with good Java to join their QA team and we believe this is a great opportunity for a professional with your experience.

Project Responsibilities:

Tech-stack

- - API Functional Testing using Java-Based Framework (TestNG + Maven + Java)
- - Testing Automation
- - Java OOP Language (e.g. Spring, Hibernate, etc)
- - Performance Testing using JMeter
- - Cloud/AWS

Expected start date: ASAP

Expected length of the engagement: 12 months Full-overlap con US PST (is a must)

N° roles: 1 Sr Engineer (5 + years of experience)

Location Constraints: LATAM Candidates ONLY

6. Compiler Tool Chain Developer JOB-28979: Global

Must have skills: C++

Nice to have skills: Deep Neural Networks

Project Description:

Our Client's group of researchers, scientists, technologists, engineers, designers, and thinkers are inventing what's next in computing.

They're relentlessly curious about all the ways that computing can change the world. They're currently obsessed with advancing the state of the art in AI and hybrid cloud and defining the future of quantum computing. The confluence of the technologies we're building represents a step-change in computing that will surpass anything we've seen before. Together, they can exponentially alter the speed and scale at which we can uncover solutions to complex problems. We've come to call this accelerated discovery.

Project Overview:

Be part of the compiler team to own and deliver tools used in compiler optimization passes and code generation. Requires background in compilers and architecture, to understand the goals of the compiler optimizations, and implement these passes integrating with the rest of the compiler tool-chain. Develop unit-level and integration tests to verify the solution before deployment.

Position Responsibilities:

This position is to work on a compiler for pre-can routines and libraries that will be used by both internal teams and also integrated by clients on their own libraries and developments.

Must have experience with:

- C/C++
- Building compilers (this is a must)
- Driver/Kernel level programming
- Develop pre-can routines and libraries that will be used by internal teams
- Also, the external client will use these SDKs and libraries for their own development

7. Ruby Backend Engineer JOB-28619 Global

Must have skills:

- Ruby
- PostgreSQL
- RabbitMQ
- AWS (Amazon Web Services)
- Vue.js

Nice to have skills:

- React.js
- Docker
- Kubernetes

Jobandtalent provides a service that offers job openings for roles like drivers, platform deliveries, warehouse workers, temporary workers, and schedules night/day workers throughout many cities and countries

The company is located in Spain, with open business throughout Europe, but they are expanding to Mexico and USA. They are looking for skilled engineers with experience in developing Services Distributed architecture using Ruby on Rails. They will work directly with their Product Managers & Designers in developing delightful solutions for their users.

Also, experience with

- AWS Cloud tools
- RabbitMQ
- PostgreSQL is needed.

Share your latest Resume with Job Title at: remotetalenthunt@gmail.com

8. Senior Distributed System Engineer JOB-28609 Global

Must have skills: Golang (Go)

Nice to have skills: C++

Project Description:

About the Quicksilver project and what you can expect

Quicksilver is Cloudflare's distributed key-value store. It replicates our data in milliseconds all around the world, over thousands and thousands of servers, and across more than 200 data centers. It handles all kinds of network conditions, hardware failures, kernel bugs and is queried over 60,000,000 times per second 24/7. It is a critical function to delivering Cloudflare's products and services to customers, which means we need to ensure it's super fast, super reliable, and super scalable; as internet properties grow, so will we.

We're looking for a collaborative and enthusiastic Systems Engineer to contribute to the evolution of Quicksilver.

Along with the rest of the team, you will own and support the whole stack: the code base, the unit, and integration test, deployment and rollback plans, operations, monitoring, alerting, and debugging. Quicksilver is written in Go and C++.

Project Responsibilities:

Desirable skills, knowledge, and experience

You are curious; you are comfortable pursuing issues through multiple layers of a software stack, and enjoy investigating, understanding, and solving problems.

You understand the value of simple but considered design for complex issues.

You care about writing robust systems, code quality, performance, and technical debt. You understand the trade-offs that doing rigorous engineering requires.

You have a passion for storage systems, peer-to-peer systems, distributed systems, or simply system programming in general.

16.Data Engineer (APAC) JOB-28886: For (India & Latam Countries)

Must have skills:

- Python
- AWS (Amazon Web Services),
- Apache Spark
-

Project Description:

We're the fastest-growing demand-side platform in the industry.

We are looking for an experienced Data Engineer to join our Solutions Architecture team:

You have a sustained track record of making significant, self-directed, and end-to-end contributions to large and impactful software projects, particularly in the data engineering space. You think beyond just the task at hand to deeply understand the 'why' behind what you are doing.

You understand engineering fundamentals. At our scale, many off-the-shelf techniques, and existing technologies (open source and enterprise) simply don't work. You can work from the first principles to evaluate solutions and adapt them to a unique environment. You are a broadly skilled engineer, accustomed to developing web services. You have experience building always-on systems, working across a variety of technologies and service layers.

You have a product-focused mindset. You have the passion and ability to contribute to the process of discovering what will delight our clients and push forward one of the world's largest and most influential industries toward a vision of openness, transparency, and evidence-based decision-making.

You work with confidence and without ego. Our engineers have deep knowledge and exercise a high degree of leadership in their daily work. You have strongly-held, defensible ideas, and advocate for what you believe is right. You are also adept at identifying and evaluating trade-offs, willing to be proven wrong, and quick to walk through fire to support your fellow teammates.

You value, seek out, and foster diversity. We are a global team from many diverse backgrounds, with different experiences and perspectives. To complement this team, you will welcome ideas that are different from your own and be skilled at finding and building from common ground.

You are a creative thinker, not bound by "the way things have always been done". What you know is less important than how well you learn and innovate. We don't need

engineers who know all the answers; we need engineers who can invent the answers no one has thought of yet, to the questions yet to be asked.

Position Responsibilities:

You will be an end-to-end owner. You will interact with some of our largest clients to understand their requirements and business goals. Based on their business goals, you will design and build large-scale data processing systems, data pipelines, computationally intensive statistical modeling, and advanced analytics solutions that incorporate AI or ML models proposed by our data scientists.

You will create data tools for data science team members that assist them in building and optimizing those models in the first place. You will build or extend the pipelines
